SHEAR&BALER **RAPID S**

TECHNOLOGY AND EXPERIENCE

A concentration of technology and experience, strength and speed, robustness and simplicity of construction, reliability and safety. "RAPID" shears&balers are synonymous with production, low consumption, high performance. "RAPID" shears&balers are designed for heavy duty work, for those who demand quality, clean and high density scrap metal. Machines adapt to HEAVY-DUTY, suitable to shear particular consistency scrap (demolition, production scraps, stamping and rolling trimmings, pantographed sheet metal scraps, reinforced concrete rod, rails...).

"RAPID" comes in two different configurations, "H" and "S" type.

The "S" type supported by two independent frames integrated and connected; one part supporting the shear and the compression box, the other part the engines and the hydraulic system. The machine includes a cover in tubular structure to protect the shear head and covers to protect the cylinders of the lids. The hydraulic system is covered and protected by a platform mounted longitudinally to the machine above the feeding cylinder, complete with cabin, ladder and handrails. "RAPID" does not need foundations. They are the evolution of the well-established and tested "swinging wing" compression system.

SHEAR&BALER **RAPID S**

	RAPID		RS11	RS12	RS13
Cutting force		tons	1100	1200	1300
Clamp		tons	280	280	280
Bale dimensions		mm	1000x700	1000x700	1000x700
Open box width		mm	2900	2900	2900
Box length		mm	7200	7200	7200
Cylinders per wing		n	3	3	3
Max. compression force (each wing)		tons	450	450	450
Main cylinder compression force		tons	150	150	150
Main electric power		kw	2x200	2x200	2x200
Diesel engine		hp	500	500	500
Indicative weight		tons	190	210	210
